- This in-depth presentation examines every phase of Wright's architecture, ranging from his much-celebrated monumental projects to the lesser-known from all periods. Furthermore, the exhibition focuses on the broader architectural issues that frame Wright's production: his interpretation of nature, his use of technology, and his relationship to the modern movement in Europe and America.
- The exhibition includes 350 original drawings, many of which have never before been shown; thirty scale models, many of which have been specifically commissioned for the exhibition; six full-scale constructions representative of the spatial and material qualities of Wright's work; and 120 photographs; as well as a selection of architectural fragments.
