The exhibition "The Object Transformed" was shown at The Museum of Modern Art from ~~June 28~~ through August 21, 1966. On behalf of the Museum, I wish to thank the lenders: artists, collectors, and galleries for their cooperation and for permission to reproduce their work. I also wish to thank Massimo Vignelli for the design of this publication which reflects his sympathetic response to the exhibition.

The utility of any artifact presumably depends on how well it performs a specific function, such as picking up dust or conveying us from one place to another. But vacuum cleaners and automobiles, apart from the efficiency with which they perform their functions, are also generally recognized as emblems of a way of life involving powerful emotional commitments. Quite often the social distinctions we observe are the true objects of manufacture and in this sense the individual vacuum cleaner or automobile is only a passing manifestation, proving the owner's identification with a particular group.

The strength of such emotional commitments is often deplored by those concerned with "good design." To the esthete and the design technician, the most relevant issues are those pertaining to performance characteristics and the consequent choice of appropriate forms. That the dominant forms of modern industrial design have been largely geometric is usually explained in terms of functional suitability, although, in fact, geometric forms have a strong emotional appeal, associated not only with painting and sculpture but also derived from the values established by what used to be called "moral philosophy."

Esthetic predilections would seem to be inescapable, but for even the most dedicated enthusiast of good design certain kinds of objects elude esthetic criteria simply by being what they are. Toilets, for example, are in fact no less eligible for rational design analysis than any other artifact; and yet to most of us, it seems safe to say, no matter how elegant or sculptural or rational a toilet may be, it is difficult to take its design altogether seriously. Weapons, on the other hand, are often superb examples of form perfectly adapted to function, with a concomitant esthetic excellence. But few of us are ready to appreciate the esthetics of weapons without reservation, because they are objects whose very purpose seems to deny the value of such excellence. Our attitude toward function, in other words, is not neutral. Some objects are made worse by being made better; it would be fatuous to pretend that excellence of design could make a well-upholstered chaise and an electric chair equally worthy of admiration.

Most objects occupy what may be called a

psychological temperate zone. They make few emotional demands on us. They are neither so trivial as to merit removal and destruction, like packing crates, nor so significant that they impinge on our consciousness by being explicitly beautiful. Undemanding objects are often particularly agreeable; the wine bottles, guitars, and pipes seen in cubist paintings are attractive partly because they have a certain friendly appeal, different from mere inoffensiveness. Most such objects seem to belong to categories of use pertaining to pleasure and renewal: eating, drinking, making music. The telephone, when it is not presented to us as an instrument of efficiency, is sometimes advertised in a similar context of relaxation—but the association is not altogether convincing.

The emotional content we associate with any object depends on more than the object alone. Hidden associations may be revealed when one object is related to another, or otherwise taken out of its familiar context, or when even a single detail is removed or altered. If the resulting visual metaphor is sufficiently powerful, even the most ubiquitous artifact may be transformed into an object of emotional rather than practical utility: a work of art. These abrupt reversals or transformations of psychic energy were exploited with unrelenting humor by the Surrealists. René Magritte's painting of a room, dominated by a comb and bar of soap, ordinary in every respect except for their monstrous size, challenges our indifference to such commonplace objects, partly because the change of scale makes us assume the existence of giants, and partly because the objects seem to have taken over the ordinary world. Salvador Dali's images of limp, perhaps melting, timepieces, on the other hand, do not imply misshapen human beings but rather suggest a poetic metaphor on the nature of time. Morris Graves's fantastic drawings of chairs (p. 16) distort furniture styles in order to comment on European politics just before World War II.

Complex associations can also be exploited without changing the object itself, or indeed without the object being actually present. In Joan Miró's *Portrait of a Dancer*, the dancer is not pictured but is implied by the conjunction on a background of a

5

real feather and a real hatpin; the title acts as a catalyst producing a third reality. Marcel Duchamp achieved an even more drastic manipulation of association by placing a urinal upright on a pedestal and giving it the title *Fountain*. Knowing that the object is not what it is called can be especially important when our associations are contradicted by a sustained pattern of behavior. An example is the famous sequence from the film *The Gold Rush*, in which Charlie Chaplin carefully prepares and consumes with great pleasure a meal consisting of a boot. But the sequence of moving images on the screen, however engaging, does not physically involve the viewer. This involvement is produced by Michelangelo Pistoletto's painting, on a mirror, of a man with his back turned to the viewer (p. 34). The "unreal" man and the real viewer find themselves part of the same image.

However forceful pictorial images may be, they cannot compete with the violence done to our perceptions by transformations of actual objects. Meret Oppenheim's cup, plate, and spoon covered with fur (p. 13), and Man Ray's tack-studded iron (p. 28), force on us physical associations of singular incompatibility. The effectiveness of these objects depends to some extent on our recognizing the originals within the transformation; knowing that they are, or were, an authentic cup and iron is necessary to a just appreciation of their new effectiveness.

In recent years the useful object has again been of compelling interest to artists and designers, but not everyone who has found a point of departure in an object has retained the object itself. The soft typewriter of Claes Oldenburg, for example, and the leaning chairs of Lucas Samaras, are not actual objects that have been transformed. They are rather portraits, or perhaps caricatures, of the originals. The transformed objects chosen for this exhibition have in common the fact that they were once of practical use. Each of them functioned with reasonable efficiency, and the transformations were not intended to enhance the objects in any conventional design sense. An exception is Bruno Munari's clock (pp. 30-31), in which discs of colored plastic replace hands and numerals to make a kind of picture in motion in which time is deprived of its

urgency. The philosophical overtones of this transformation depend on heightening the familiar elegance of that industrial precision which invests a real clock with solemn authority. More often, a transformation removes an object entirely from the realm of design, sometimes with extraordinary fervor. A book, for example, is usually a carefully made object we are conditioned to handle with respect. Three examples of transformed books in the exhibition upset this response by acts of destruction. Lucas Samaras covers a book with pins and nails and inserts between its pages a razor, a knife, scissors, and a broken pane of glass (pp. 26-27); seldom has a book been more dangerous to open. Jasper Johns presents us with an open book (p. 24), but its pages are congealed in colored wax, and the print is all but obliterated, concealing the information we suppose the book to contain. Our desire to separate its pages is frustrated by its being enclosed in a glazed box, apparently to preserve it for posterity. John Latham's book (p. 25)—actually one book and parts of others—has burned and folded pages, and is forced open by a closed volume wedged between them like a hatchet; one book destroys another.

Household furnishings are almost as emotionally charged as books. Two of the four examples in the exhibition are chairs. One by Les Levine (p. 20) is completely concealed under a tautly stretched skin of shiny plastic, under which the splayed legs and arms of a captain's chair seem to be struggling to emerge. Fabio de Sanctis' chair (p. 19) is swathed in painted fiberglass, its baroque folds and dripping paint combining to suggest the decomposing shroud of a mummy. A similar entombment is produced by the copper plates nailed over a table-top radio by Tony Palladino (p. 33). The transformation of these three objects is brought about by covering them with an extraneous material which destroys their usefulness but presumably preserves the objects themselves. The mattress by Ralph Ortiz (p. 23), however, is transformed by outright destruction. Gutted by fire and doused with water, and resembling a mass of gray seaweed, it is perhaps the embodiment of a nightmare.

Less violent, and sometimes amusing, are those transformations which neither add, subtract, nor

obliterate, but merely deform, like Janet Cooper's cluster of sagging milk bottles (p. 14) and Bruno Munari's gesturing forks (pp. 10-11). Of comparable humor are Man Ray's pipe with a permanent bubble (p. 18) and Preston McClanahan's glass overflowing with permanent foam (p. 21). Both transformations introduce images which suggest an ephemeral use while at the same time making such use impossible.

Even such relatively frivolous inventions have overtones of grim absurdity. Like many ideas and images current in the theatre, the transformed object is an apparition of everyday reality. For the twentieth century, it may be the most appropriate kind of still life.

Indonesia's foreign minister, Adam Malik, said his country would like to bring a peaceful end to the "Communist Mayday" campaign President Sukarno launched in 1965. Although this was a violation of an earlier stand, officials in Bangkok, where Malik made the statement, viewed it as a significant gesture. Indonesia now has a new anti-Communist government and Sukarno's power has been trimmed.

Stronger action against Rhodesia is being sought by the U.N. African members. Diplomatic sources said a proposed Security Council resolution would demand that Britain use force to prevent Ian Smith from sending South Africa with oil for shipping, which declared independence from Britain last Nov. 11.

Many more veterans paraded in Saigon in support of Kennedy's President Kennedy, as he launched his "little election" campaign against former Vice President Lyndon B. Johnson and his allies for 30 of the 100 seats in parliament. Kennedy's presidency had at stake, due to his party's majority in parliament, not his winning Johnson and his followers that if they provoked the government and caused trouble he would "know them in jail without any mercy."

A birth-control pill that can be taken after sexual relations to prevent pregnancy has shown some promise, in early studies, two Yale University professors said. But it is expected that it would take years before the safety and effectiveness of the so-called "morning-after" pill could be conclusively established.

A study of married women indicated the difference in the percentage of birth-control pill users among Catholics and non-Catholic wives is surprisingly small. The Princeton University survey of 5,000 married women showed the pills had been used by 71% of the Roman Catholic wives under age 40 and by 73% of the non-Catholic wives. The Roman Catholic Church forbids the use of contraception.

The American Medical Association denounced the Food and Drug Administration for the way it has tightened Federal regulations on the drug industry. The AMA president, Dr. James C. Appel, said, "The manner in which the agency suddenly seizes drugs and accompanies this activity with alarming language tends to create an atmosphere of hysteria."

The Dallas area counted 19 deaths and put damages at more than 13 million from three days of torrential rain and flooding. The dead included five persons who drowned when their cars went into the swollen Trinity River.

An effort "to break the logjam" in New York's eight-day-old newspaper strike will be made today by mediator Theodore W. Kheel. He said he would meet with representatives

of both sides. A key of the strike has been sought by the union, a 10-day-old strike that now is in its 10th day. The union's demand is for a 10% wage increase and a 10% cost-of-living adjustment. The union also wants a 10% increase in the cost-of-living adjustment. The union also wants a 10% increase in the cost-of-living adjustment.
